

Product Enhancements

With Recycled Parts Services insurers will have the ability to view parts from more suppliers.

The CCC Pathways® user does not need to make any changes to the CCC Pathways® unit in order to use Recycled Parts Services.

REDUCE THE WAIT TIME FOR YOUR CUSTOMERS

- > Recycled Parts Services provides the continued capability to accept recycled parts on a nightly basis from multiple vendor sources.
- > Users are now able to view recycled parts from up to 20 suppliers. The new maximum will be 20 suppliers.
- > Fully integrated with CCC Autoverse® Claim Management and CCC Accumark™ Reinspection.
- > RPS gives users access to more data than is usually communicated during a telephone call, including an expanded part description, year, make, model, and mileage of the donor vehicle. This allows the selection of the most appropriate part that is the closest match to the estimated vehicle.
- > Recycled assembly cost can be compared to the “build cost” of multiple OEM, aftermarket, reconditioned and repair parts—without disrupting the estimate process.
- > The integration of salvage prices eliminates the need for calling individual salvage yards or salvage search type service providers.
- > The ability to make cost effective repair decisions enables users to price vehicle repairs competitively to attract and/or maintain DRP relationships.
